Made in PRC

How to use artificial grass tape

Initial Considerations:

- Kindly note: Non-woven fabric based, white release paper, painting with hot melt pressure sensitive adhesive on single side.

- Ideally choose a dry day, choose a day or place that it is not too windy
- Keep dry during installation

Using the Artificial Grass Tape:

- Cut the length of tape you need according to the length of the artificial grass
- Secure this end of the tape with either heavy duty nails or a heavy item, anything which will allow you to pull the tape slightly taut.

- Carefully peel back the white backing layer of the tape, exposing the very sticky part!
- Carefully lay the artificial grass onto the tape, two pieces artificial grass should each lie halfway across the entire width of the tape.

- Pressure onto the artificial grass to ensure adhesion.
