

**LED light**

Each solar light contains 51pcs SMD LED. Do not attempt to replace the LED.

Battery

1x1.2v AA 400MAH NI-MH rechargeable battery (each torch).

How it works

- During the day, the solar panel converts sunlight into electricity to recharge the battery.
- At night the LED turns on automatically and lights up using stored electricity.

How to install the solar light

1. Install the light in a sunny location with full direct sunlight. Shady locations may not allow the battery to fully charge and will reduce the hours of performance during the night.
2. Remove the top of the solar light, and turn over to locate ON/OFF switch.
3. Push the ON/OFF switch to the "ON" position to activate the device.
4. Charge in direct sunlight for 6-8 hours.
5. The LED will turn on automatically at night.
6. Push the ON/Off switch to the "OFF" position to deactivate the device.

Battery replacement

1. Remove the upper parts of the body that is pushed into the main housing and turn over the unit.
2. Remove the screws and lift the battery cover off the body taking care not to pull any wires. Note the polarity that the battery is fitted.
3. Remove the battery and replace with a new 1.2V AA 400MAH NI-MH rechargeable battery according to the polarity symbols.

Safety guidelines

- This is not a toy. Keep out of reach of children.
- Do not immerse the unit in water or other liquids as this will result in permanent damage to the electrical parts.
- Keep the battery away from sources of heat and fire, otherwise it may explode.

Winter time tips

- Keep snow and debris cleaned from the solar panel, so the battery can recharge.
- If it is going to snow, press the switch to the OFF position and keep the unit indoors.

- After the snow melts, charge the light for 8 hours in full direct sunlight, for the battery to recharge to its full capacity with the switch in the ON position.

Trouble shooting

If your solar light does not turn on at night, it may be caused by one of the following conditions:

Battery is not fully charged	Make sure your unit is located in an area where the solar panel is able to receive direct sunlight and charge efficiently.
Dirty solar panel	A dirty solar panel will not allow the battery to be fully charged. Clean the solar panel regularly with a damp soft cloth.
Battery has reached the end of its useful lifespan.	Please replace.

BATTERIES

- Remove the batteries if left for long periods.
- Never dispose of batteries in a fire.
- Keep batteries away from children and pets.
- Battery disposal, spent or expired batteries must be properly disposed of and recycled in compliance with local regulations. For detailed information, contact your local authority.
- Follow the battery manufacturer's safety, usage, and disposal instructions.

DISPOSAL

- Dispose of all packaging, paper, cartons, plastic and plastic bags in accordance with your local recycling regulations.
- At the end of the product's lifespan please dispose of it at an authorised household WEEE waste recycling centre.
